Abstract (en)
[origin: WO02072972A1] The invention relates to an insolation regulation, modulation and distribution device comprising a support structure (1) for a cover for the space to be protected from the sun and control means for moving said cover periodically in the plane thereof. According to the invention, the cover comprises at least one layer (2) which is provided with at least two types of zones (3, 4) having different light transmission properties, the distribution of which is predetermined.
