Abstract (en)

[origin: WO02071585A2] The invention relates to a circuit and a method for inputting a start signal, wherein a controller is switched from a first to a second state depending on a start signal, wherein power consumption of the controller is higher in the second state than in the first state, wherein the circuit has a clocked power source that emits a power signal in rhythm and the start signal is formed depending upon the power signal.
