Abstract (en)
[origin: WO02073746A1] The invention relates to a line connector with a metal connector body (1) which, in its upper section, has a receiving opening (3) for an electrical conductor into which a clamping screw (2) extends. On its lower end the connector body (1) has at least one projecting zone with which it can be inserted in a printed board and soldered to the opposite side thereof. Two projecting zones (4, 5; 6, 7) are provided on the lower end at a distance to each other between which the connector body (1) forms a continuous recess (8) that is open toward the bottom. The upper terminal wall (9) thereof, when mounted on a printed board, is located above and at a distance to the printed board.
