Abstract (en)

[origin: EP1369056A1] The applicator consists of a holder (7) e.g. in the form of a cap for a container (3) of a cosmetic product (P), a stem (6) and a tip e.g. in the form of a cylindrical brush (20). The stem and tip of the applicator do not share the same straight axis, i.e. the stem and/or applicator can be curved. The applicator tip can have radial bristles and an overall shape that is not symmetrical relative to its core, and the applicator stem is connected to the holder by an articulated joint (10) that allows its position relative to the holder to be modified for more convenient application.
