Abstract (en)

[origin: EP1369531A2] The attachment for a wheeled loader, to lay and remove loose covering and carrier layers and also lay bonded layers, has a stripping beam (1) held centrally at a jib (3) by a coupling, with a linkage to give free swing movements around three axes (x,y,z). The ends of the beam are held over the ground by a support (2) with height adjustment, and which can be extended so that the beam can swing around a horizontal axis by an angle of 0-45 degrees to the ground along the longitudinal movement line of the machine (5).
