Abstract (en)
[origin: EP1369549A1] The tilting door (9) has a frame (13) fitted to the masonry structure (27), to hold at least two door panels (18-20). Each panel has a vertical alignment when the door is closed, to cover the door height, vertically over each other across the door width. Each panel has an inner (23) and an outer (24) wall, with a gap between them to be filled with insulation material. Each panel is self-supporting, to give a rigid and reinforced structure apart from the frame.
