Abstract (en)

A back-lighted, dynamic, multi-purpose advertisement medium, with a one-way wraparound device, the final images of which are formed based on image portions. It refers to a combined system of blocks (23), media for backlighted image portions (39), connected by shaft portions (24) that enter through the side into pinch rolls (25) with ribs (31) gearing in holes in a endless clear strip (33), attaching sheets of a flexible material (39) which are displayed rotating jointly on the front portion of the block (23). The blocks will be attached to the metal container medium (1) by means of male couplings (13), closing of the left side (2) with sliding parts (3) is carried out after the blocks have been arranged, metal container medium useful for advertisements covering facades, public transport (buses, trains, etc.), freight transport (vans, trailers, etc.), street furniture, airports, etc., as well as all existing advertisement panels. <IMAGE>
