Abstract (en)

The branch box comprises a box plate, an upper first box cover and a lower second box cover. Between the box plate and the first box cover there are means for receiving conductors of a cable. Between the box plate and the second box cover there are means for receiving second conductors which are resiliently connected with an outlet. The outlet is a modular component which is fixed to the branch box. Because of the modular construction, it is possible to easily change the design of the outlet of the box by changing the shape of the outlet. <IMAGE>
