Abstract (en)
[origin: EP1370119A2] The dimmer device has a number of power stages (1.1-1.n) thermally coupled to a common cooling body (2) and designed for optional parallel connection of at least two power stages on the load side. The power stages, which are coupled on the input side, are connected to an input stage (3) delivering the entire load current, whereby the input stage has a device for current limiting based on thermal monitoring.
