Abstract (en)

[origin: WO02070180A1] The invention concerns a high-speed dry-process-machining tool (0) comprising a body (100) whereof one first end (110) includes material removing means (200) and the other end (120) is urged to be connected to an activating means. The invention is characterised in that the end (110) including the material removing means (200) is provided with an orifice (111) opening onto an internal conduit (1130) which, when set under negative pressure, evacuates by air displacement the shavings produced by said material removing means (200). The invention also concerns the electric broaching tool and the machine-tool equipped therewith. The invention is applicable to high-speed machining.
