Abstract (en)

[origin: WO02074540A1] The invention relates to a method for operating a pressure unit comprising at least one counter-pressure cylinder (03) and a transfer cylinder (04) forming a pressure point therewith. The counter-pressure cylinder is mechanically actuated by means of a first drive motor (06) independently from the transfer cylinder. In a pressure -on- position, the counter-pressure cylinder is adjusted as a guide variable in relation to the power of the motor which drives the cylinder.
