Abstract (en)

[origin: FR2821201A1] The invention concerns a device comprising a glove (G) adapted to be worn on the user's hand. The glove is equipped with several sensors connected to a printed circuit connected to an electronic interface (IE) designed to format and transform electronic signals into MIDI signals, said interface being connected to the soundboard (BS). The glove (G) is designed to interact with a tabor (T) held in the user's other hand. The tabor surface (T) acts on the sensors. The invention is useful for reducing sound nuisance of certain concert instruments and enhance scenic effects.
