Abstract (en)

[origin: WO02075881A2] The topology of a bus or network electric line system which is used to provide a plurality of electric consumers ( 1- 5) with low voltage from a feed block (6) is inputted into a computer. For several feed points (40), a measuring value is determined for the electric line system on the basis of at least one technical criterium and is transmitted to a user (38) as a function of the feed point (40). It is assumed that the feed block (6) is connected to the electric line system at the respective feed point (40).
