Abstract (en)
[origin: EP1371900A1] The combined uplighter and secondary lamp has a tubular structure. It includes a central joint at which the secondary lamp is attached to the main upright lamp. This joint is formed on an inclined surface with an adjustable clamp unit. The combined floor lamp includes a base (2) and upright support tube (4) forming a lower section (3). This support carries a further upright (20) carrying a main lamp unit (7), and a secondary extension (28) carrying a secondary lamp (8). The main lamp unit comprises an upwardly directed reflector and lamp, whilst the secondary unit is directed downwards. The secondary unit is attached by a clamped adjustable joint (23) set on an inclined angle at the top of the lower base section (3).
