Abstract (en)  
[origin: EP1371930A2] Tubular weapon comprises a weapon tube (2') which axially slides in a mounting tube (3). The weapon tube is positioned in a first slide bushing bearing on the mouth side end and in a second slide bushing bearing on the base side of the mounting tube. The first slide bushing bearing comprises a tubular bushing (7') having an outer surface (8) sliding in the mounting tube. The tubular housing has three groove-like recesses (9') distributed over the periphery which interact with three protrusions (10'). Play is provided between the outer surface of the weapon tube or on of the protrusions and the inner surface of the tubular bushings and between the strip heads and the inner surface of the recesses. Preferred Features: The protrusions are fixed to an inner ring which is connected to the weapon tube.
