Abstract (en)

[origin: WO02076246A2] The invention relates to a method and to a device for producing a filter for products of the tobacco industry, according to which strips (16) of filter material (13) are supplied to a formatting device (18, 22), the strips (16) being cut from a layer of filter material (13). The inventive method is characterized in that the width of the layer of filter material (13) is cut from a filter material supply (10). The inventive device is characterized in that at least one second separation element for separating the layer of filter material (13) from a filter material supply (10) is provided. The invention further relates to a filter for products of the tobacco industry that is especially produced according to one of the inventive methods and that is characterized by a plurality of superimposed web strips.
