Abstract (en)
[origin: US2004113380A1] The invention relates to a golf bag that essentially comprises a ready-to-go, bag-type container with carrying handle that accommodates the clubs and at least one further insertable accessory. The clubs are disposed in recesses that are distributed across the circumference of the container, thereby forming a center cavity. The golf bag also comprises a trolley on wheels and a towing bar with a handle and an electronic control. The aim of the invention is to provide a golf bag that can be used for many purposes. To this end, the recesses for the clubs (2) are configured as chambers (9) subdivided by internal partitions (8) between an inner tube (6) and an outer tube (7), several chambers (9) forming together a flap (18) across the length of the container (5) that can be opened or closed. The container (5) can further be provided with a hoop (11, 11') that is configured as a trolley and that can be linked with wheels (13), an additional wheel (40) on the bottom (25) that can be driven by an electric motor and, on the top and bottom end, covers (21, 22) that are adapted to the cross-section of the container and that can be partially pulled on the bag. The container is further linked to a suitcase-type, transportable unit by means of a linkage (23) that extends in the center thereof. The wheels (13+40) are housed in the upper cover (21) and in the lower cover (22) and the trolley hoop (11, 11'), the motor and the battery (41) in the interior of the container (5). It is likewise possible to accommodate the entire drive unit in the interior of the container.
