Abstract (en)

[origin: WO02074527A1] The invention relates to rotary tablet presses (100) comprising a rotatable tablet press kit which is formed from a die plate (21), an upper guiding ring (32) for the upper upper punch (25) and a lower guiding ring (27) for the lower punch (28). The invention also relates to a method for disassembling or assembling especially the kit (20). The individual disassembly or assembly steps are stored in a protocol and a pre-determined time interval is associated with each disassembly step. An automatic or manual release is required at the end of each disassembly step or process. Said release can only take place, at the earliest, once the corresponding time interval has elapsed. A lifting device for lifting or sinking the tablet press kit (20) can only be switched on once all of the preparatory disassembly steps have been carried out.
