Abstract (en)
[origin: US2004074406A1] A drive mechanism is provided for a printing unit which is comprised of a first cylinder having its own drive motor, and a second cylinder that cooperates with the first cylinder in a printing position and which has its own drive motor. A standard locking gear, which has at least one pair of links which are cooperating with one another and with spur toothing, is arranged between the first cylinder and its assigned drive motor.
