Abstract (en)

[origin: WO02081576A1] A method for producing a low-extractable film packaging from an actinic radiation curable aqueous composition containing a water soluble compound having at least one alpha , beta -ethylenically unsaturated, radiation polymerizable group and water as essential components carried out by applying the aqueous composition to a surface which is then irradiated with actinic radiation in the presence of the water thereby forming a cured film wherein less than 50 ppb of the water soluble compound or its residual components are extractable by a food simulant.
