Abstract (en)

[origin: WO02055642A2] The invention relates to an agent for removing solid particles from surfaces, containing polymers, surfactants and other constituents. The above-mentioned polymers are naturally polygalactomanans. The agent exists in the form of a gel and runs together or can be mixed together so that the contaminated particles are embedded in the material and new surfaces are formed for receiving other contaminated particles. The invention also relates to the use of agents such as gel cleaners, cold cleaners, neutral cleaners, textile cleaners, disinfectives and/or technical cleaners.
