Abstract (en)
[origin: WO02081854A1] A sash for a window or door comprises a profile frame (1) that forms a rebate (3). Said rebate accommodates an insulating glazing (2), has a peripheral surface (6) that surrounds the insulating glazing (2) on the face, and has a rebate surface (12) that overlaps the edge of the insulating glazing (2). The sash also comprises an adhesive layer (7), which fixes the insulating glazing (2) inside the rebate (3) and which fills, at least in peripheral areas, a peripheral gap (8) between the faces (5) of the insulating glazing (2) and the peripheral surface (6) of the rebate that are situated opposite these faces (5). In order to make it possible to exchange the insulating glazing, the invention provides that a limiting element (22), which runs in the peripheral direction and which is provided for the adhesive layer (7), is placed in the area of a covering pane (11) of the insulating glazing (2), said covering pane facing the rebate surface (12), at a distance from the rebate surface (12).
