Abstract (en)

[origin: WO02073210A1] The invention relates to a method for promoting aggregate formation from protein subunits in vitro which is characterized by comprising at least two steps (a) and (b). In step (a), the aggregates are formed and in step (b) attachment of the protein subunits to the aggregates is induced. In a preferred embodiment, steps (a) and (b) are repeated several times.

[origin: WO02073210A1] The invention relates to a method for promoting aggregate formation from protein subunits *in vitro* which is characterized by comprising at least two steps (a) and (b). In step (a), the aggregates are formed and in step (b) attachment of the protein subunits to the aggregates is induced. In a preferred embodiment, steps (a) and (b) are repeated several times.
