Abstract (en)  
[origin: DE10113392A1] The invention relates to a hologram carrier comprising a hologram surface and a reference surface for facilitating capture of the hologram surface by means of a device. The reference surface thus comprises at least one graduation which is arranged on the device for device-oriented interlocking with a complementary embodiment.  
[origin: DE10113392A1] The hologram data medium (1) has a hologram surface (2) and a reference surface for facilitating hologram surface detection by a device (5), whereby the reference surface contains at least one step for engagement by a complementary formation on the detection device to align the detection device.
