Abstract (en)

[origin: WO02079911A2] In a secure electronic payment, authentication data is sent from a payment account issuer to user software operated by a purchaser. The user software sends the authentication data to a merchant using hidden fields on the Web page of the merchant. The merchant generates an authorization request message based upon the authentication data. The authorization request message is sent to a payment organization either directly from the merchant or via the merchant's acquirer. The payment organization forwards the authorization request message to a payment account issuer which verifies the authorization request message, thereby generating an authorization response message which is sent to the payment organization. The payment organization forwards the authorization response message to the merchant, either directly or via the acquirer.

[origin: WO02079911A2] In a secure electronic payment, authentication data is sent from a payment account issuer 406 to user software 402 operated by a purchaser. The user software sends the authentication data to a merchant 404 using hidden fields on the Web page of the merchant 404. The merchant 404 generates an authorization request message based upon the authentication data. The authorization request message is sent to a payment organization 408 either directly from the merchant 404 or via the merchant's acquirer. The payment organization 408 forwards the authorization request message to a payment account issuer 406 which verifies the authorization request message, thereby generating an authorization response message which is sent to the payment organization 408. The payment organization 408 forwards the authorization response message to the merchant 404, either directly or via the acquirer.
