Abstract (en)

[origin: WO02076168A1] A device for electromagnetic shielding, comprising a body (4) and, arranged thereon, a shielding surface (9) which is circumferentially defined by an elastic and electrically conductive sealing means (6). The body (4) is made of a material without any essential electric conductivity and supports an element with (5) electrical conductivity. The element (5) has a first surface (7) facing the environment. The sealing means (6) circumferentially defines a portion of said first surface (7), which portion forms said shielding surface (9). The present invention also relates to a method for manufacturing such a device, and a mobile telephone comprising such a device.
