Abstract (en)

Method for applying a glue to an insole for shoes by using a machine for manufacturing shoes, comprising the following steps: positioning on a support element a shoe form on which an upper is stretched and to whose underside an insole for shoes is associated, the latter extending between a back end and a front end, supplying a glue on a portion of the insole through one or more glue suppliers (22) which can move on said portion of the insole so as to follow a predetermined path and be pressingly engaged with the insole, to keep the insole itself in contact with the underside of the form. At the end of the step of supplying the glue at least a glue supplier disengages from the insole by a disengagement point placed near the front end of the insole. <IMAGE>
