Abstract (en)

[origin: EP1374734A1] The drawer guide for furniture has a compensator (14-19) with a compensator lever (14) mounted on a rotary bearing. The lever is connected to a guide rail (2,4,6) via a carcass bracket (1), linear bearing or decor (7). The lever is rotated at the end of the sliding closing action of the drawer to engage with stops (15). This causes an automatic compensation of the synchronizing movement sensors.
