Abstract (en)

[origin: EP1375142A2] A rotary sheet printer with multi-color printing units and at least one coating unit consisting of a container for the medium and a take-up device directed towards a cylinder is such that the medium is a liquid (8) suitable for initial or repeated coating of the cylinder, the liquid (8) being brought onto and fixed onto the cylinder by take-up device (11) to form a solid ink-rejecting and/or seal-preventing layer. An Independent claim is also included for initial or repeated coating of a cylinder with an ink-rejecting and/or seal-preventing layer by using a rubber-covered roller (2) spaced from the counter-cylinder (5), with the liquid (8) being applied to the cylinder by the take-up device (11) and fixed by UV irradiation.
