Abstract (en)

A method for the production of packs (10) of rolls of paper, in which the rolls are collectively wrapped with a sheet (11) of plastic film which is folded and sealed, allows a rational method of closing one front surface (26) of packs (10) and the simultaneous automatic production of an opening (21) at the surface for the pack (10) handle. An apparatus for implementing the method comprises suction plates (12, 13), which move vertically in opposite directions to join end flaps (17, 18) of the sheet (11) of plastic film, closing the pack (10). The flaps are joined with the aid of means designed to neatly arrange the material of the side surface (28) of the sheet (11) between the flaps (17, 18) inside the flaps as they are joined. Further means seal the two flaps (17, 18) and make a pack (10) handle opening (21). <IMAGE>
