Abstract (en)

Method wherein a conveyor belt (3) advances (arrow A) across a container train (1) and pours bulk material onto a bridging conveyor belt (4) above said container train and moving with said belt (3), wherein the operation of said bridging conveyor belt (4) is controlled such that it prevents that bulk material falls between two adjacent containers (1) if said conveyor belt (3) pours bulk material above the gap (12) between said adjacent containers (1). <IMAGE>
