Abstract (en)

[origin: EP1375772A1] A foldable truss member suitable for commercial displays includes a plurality of side members that are adjacently hinged together. The side members include support members and bridging members having extensions. The side members are joined into a foldable structure with a hinge member between the support member and extensions of adjacent side members. The truss may include a locking frame that is removably attached to ends of the side members. A display structure may also be formed by connecting a locking frame between two truss members. <IMAGE>
