Abstract (en)

[origin: EP1376383A2] Method for statistical evaluation of data uses data masks and selection criteria to select partial data quantities. Subsequent steps involve selection of a statistical method from a multiplicity of available methods to use in data processing and a step in which the selected data is copied into a data table with a predefined structure so that the selected method can be applied in a standard manner that is independent of the data content. Independent claims are also included for the following:- (a) a method for detection and removal of redundancies in data tables, especially relational database tables; (b) a computer program; (c) a data carrier; (d) and a computer system for implementation of the inventive methods.
