Abstract (en)
[origin: DE10118013A1] The one-piece and flexible support has a set of bristles fixed on one side; the other side cooperates with at least one thrust piece which controls its flexible deflection under the brush's pressure. The thrust pieces are parallel with, or at right angles to, the support and are movable manually, mechanically, and or by means of a motor. The brush has a housing containing a drive mechanism.
