Abstract (en)
[origin: WO02081825A1] A net (10) for a body of water (12) that serves to collect flat objects (11), which are made of foamed plastic and which are saturated with contamination substances, is provided with a catching net part (13), which can be vertically placed in the body of water (12) by means of a longitudinally extending sink line (18) and of a longitudinally extending float line (21, 22). The aim of the invention is to be able to pull a net of the aforementioned type through the water while tensioned, whereby an upper area of the net always remains above the water surface even in rough water. To this end, the invention provides that the catching net part (13) is widened by a flexible net part (14) that, in the area of its free longitudinal edge, is fitted with a longitudinally extending sink line (32) and is fitted with at least one main float line (33) between said longitudinal edge and the upper float line (21, 22) of the catching net part (13).
