Abstract (en)

[origin: DE10116010A1] A pressure supply device for a compressed gas-driven gun device, comprising at least one reservoir (8) for a propellant, existing at least partly in the liquid phase (14) in the at least one reservoir (8), further comprises withdrawing means (16), for withdrawing the propellant through a withdrawing opening (13) in the at least one reservoir (8). The at least one reservoir (8) and the withdrawal means (16) are arranged within the pressure supply device (1), in the in-use position thereof, such that a withdrawal of the liquid phase (14) of the propellant is possible. The invention further relates to a gun device with such a pressure supply device.
