Abstract (en)
[origin: WO02073457A2] User interfaces, methods, systems, and computer program products for improving interactions with users of pervasive computing devices such as personal digital assistants, Web-enabled cellular phones, Web appliances, wearable computing devices, so-called smart" appliances in the home, and so forth. A multi-functional application launcher is defined that is specifically adapted for use on devices with limited display space and which use pen-based input or other similar input means. This application launcher enables improved navigation, and provides an improved way to show task status information to the device user. Multiple functions per task are supported, and status information is provided, all from an application launcher view.
