Abstract (en)

[origin: WO02067226A2] The invention relates to a tag (1) that is fixed on a container. Said tag has at least one text field (2) and a flap (3) that is disposed outside the text field and has at least one opening (4). The text field (2) adjoins the flap (3) in its longitudinal extension. The text field (2) forms a large area (5), which extends on one side crosswise in relation to the longitudinal extension of the flap (3) several times the width thereof. The flap (3) is configured with an opening (4) to be fixed on part of a container, preferably a cylindrical part. Once the flap (3) has been fixed on the container, it surrounds the preferably cylindrical part at least partly. Large amounts of information can be subsequently included in the text field (2) of the tag (1) even over an extended period.
