Abstract (en)

[origin: US2004145280A1] An electromechanical transducer with at least one piezoelectric element (1, 13, 33) with a first surface on which a first electrode (3, 15, 17) is applied, and at least one contact flag (5, 29, 31), through which the piezoelectric element (1, 13, 33) is electrically connected, having an electrical connection of the piezoelectric element (1, 13, 33) of very high contact reliability, in that the contact flag (5, 29, 31) directly contacts the first electrode (3, 15, 17) and exhibits at least one depression (7, 25, 27, 39), into which an adhesive (9) is placed, by which the contact flag (5, 29, 31) is connected with the electrode (3, 15, 17).
