Abstract (en)
[origin: WO02084814A1] The invention concerns a socket capable of receiving bayonet lamps or screw cap lamps, comprising an insulating sleeve (1) having internally in its upper part a thread capable of receiving the thread of a screw base and two axial passage grooves (4) diametrically opposite emerging beneath said thread into at least two notches for locking the pins of a bayonet base, and at least three contact elements including a lateral contact element (2) for co-operating with the lateral contact zone of a screw base, and contact elements (10, 12, 15) capable of co-operating with the central stud of the screw base and with the studs of a bayonet base, the element (10) being designed to establish an electric connection with the lateral contact element (2) when it is not stressed (screw base) and in interrupting said connection when it is stressed (bayonet base).
