Abstract (en)
[origin: EP1378599A2] At least one of the arms (2) features means to ensure a forced deflection from a position close to the post (1) when a force directed away from the post is applied on one of the other arms. Each arm is supported with a holding axis (12) located on the post on one side, and an expansion arm (10) on the other; the expansion arm tilts round a joint axis (14) located on the support arm.
