Abstract (en)
The luminaire has the particularity of including a number of independent cases (3-3'-3"), in which are mounted different components (5), (6) and (7) of the electrical gear, being thereby separate from the heat source which is constituted by the lamp or lamps (2) of the luminaire (1) with respect to the possible electric power supply battery or batteries (5), as well as with respect to the remaining components, avoiding the heating of said batteries (5) and thereby achieving a longer useful life span thereof. <??>The cases (3-3'-3") are hinged to each other by means of hinges (4) which allow the change of angular position of some with respect to others, which facilitates a better and simpler emplacement and adaptability in a recess cavity.
