Abstract (en)

[origin: EP1378713A2] Fixing device for heating bodies comprises a mounting element, a fixing part (3), and a removable holding element. The holding element is a clamp (4) with two S-shaped clamping elements for clamping the heating tubes of the heating body. The fixing part has a housing (5) with a receiving opening on the rear side facing the mounting element in which a fixing element is removably and flexibly arranged. The fixing element has two symmetrically arranged spring elements engaging with the end sections of the clamping elements. The housing has two openings receiving a fixing bolt (15) with a head (16), a tensioning part and a foot part. The spring elements of the fixing element are dimensioned, arranged and pressed outward by the tensioning part so that the clamping arms (4a, 4b) are pressed together when the two end sections of the clamping element are pressed apart and are moved from an open position into a closed position in which they receive a heating tube of the heating body. Preferred Features: The fixing part and the fixing element consist of zinc die-cast parts.
