Abstract (en)

[origin: GB2374581A] A water soluble container is formed by generating a water soluble form with at least two compartments, each compartment is filled with a different composition 1,2. The container is formed by forming a first compartment, then by adding the lid which has the second compartment integral to it. For preference the compartments contain fabric care, surface care, dishwashing, water-softening, disinfectant, antibacterial or antiseptic compositions. The water soluble material of the container is preferably polyvinyl alcohol, hydroxymethylpropyl cellulose or gelatin.
