Abstract (en)

[origin: WO02084198A1] The invention relates to a device for ejecting cartridges and/or cartridge cases in a drop-barrel weapon. Said device comprises at least one cartridge extractor (14), which extracts unfired cartridges and can be displaced axially in one barrel section (2) and an ejection mechanism that acts on the cartridge extractor (14) to eject fired cartridge cases. The aim of the invention is to provide a compact construction that is easy to assemble. To achieve this, the ejection mechanism has a locking pin (21) that can be guided in a displaceable manner in the cartridge extractor (14), for locking and releasing said cartridge extractor (14) in the barrel section (2), and a guide pin (26), which is located in the cartridge extractor (14), acts on the cartridge extractor (14) by means of a compression spring (27) located inside said cartridge extractor (14) and can be displaced using a cocking lever (31) located on the barrel section (2).
