Abstract (en)

[origin: WO02082698A2] The invention relates to an entertainment device which comprises an operational control element which allows a user to search for equivalent data via said device and then reproduce said data. According to the invention, the currently reproduced data is searched for characteristic features, enabling a search for equivalent data to take place using said features. The operational control element can be used to adapt a user profile. It is also possible to store currently reproduced data in said entertainment device when the operational control element is actuated.
