Abstract (en)

[origin: EP1380228A1] The invention concerns a fixing member for fixing a body to a supporting frame comprising a first and a second part, intended for engaging one another, in which said first and second parts are designed in such a way, that the first part can engage the second part by translation or rotation, said second part is mounted on said body and is part of complementary positioning means for enabling positioning body and supporting frame in relation to one another, and in which the further means of the positioning means have been mounted on the supporting frame.
