Abstract (en)

The present invention relates to a method of producing a layered and flexible information page (10) of a secure document by laminating layers of the information page together. To make the information page in an easy and simple manner, the method comprises: forming a separation layer (9a) of a material that prevents layers (3, 4) from laminating together, placing layers (1 to 6) of the layered information page on top of each other in such a manner that the separation layer (9a) partially separates two layers (3, 4) from each other, laminating the layers (1 to 6) together, and forming a connection piece (14) by removing a part (12) from the laminated information page (10) by making a cut (11a) extending to the separation layer and by removing the part (12) separated by the cut. <IMAGE>
