Abstract (en)
[origin: WO02074325A1] A protein-in-adhesive patch for transcutaneous immunization is described with at least four different components: (i) backing layer; (ii) pressure-sensitive adhesive layer adhering to the backing layer; (iii) at least one immunologically-active protein of an immunogenic formulation applied to the pressure-sensitive adhesive layer opposite the backing layer and/or incorporated in the pressure-sensitive adhesive layer such that the at least one protein is in contact with adhesive; and (iv) stabilizer which maintains the immunological activity of the at least one protein under ambient conditions.
