Abstract (en)

[origin: WO02086242A1] The invention relates to a terminal for barrier systems from steel profiles that are arranged along traffic routes or traffic lanes. The inventive terminal comprises a inclined section disposed in front of and behind the barrier system which substantially continuously blends in with the barrier system. At least at the beginning of the structure a displaceable deformation-impact-damping device is provided that is completely or partially disposed on the inclined section.
